Product image

Original product title: 双轴光电自准直仪 精度1″ 最大测量距离10m

Product overview

This series is intended for cost-effective precision measurement. Applications include inspection and alignment of machine-tool guideways (straightness, parallelism and perpendicularity), surface-plate flatness, optical alignment and precision mechanical manufacturing. The source also describes long-distance series variants for 40, 50 and 80 metres; the specifications of each individual model govern its measuring distance.

Applications

Machine tools: guideway straightness, parallelism and perpendicularity, and flatness of large surface plates. Optics: assembly, alignment and prism-angle measurement. Metrology and research: verification and calibration of measuring instruments and tools, precision angle measurement, dynamic monitoring of angular position, and angular or straightness-error measurement of moving products. Marble inspection: straightness, parallelism, perpendicularity and flatness. Encoders: angular-encoder positioning accuracy and repeatability.

Technical specifications

Parameter	Source data
Objective focal length	150mm
Clear aperture	38mm
Maximum measuring distance	10m
Field of view	4000*3000″
Resolution	0.1″ (adjustable)
Indication accuracy	±1000″ ±1″
Light source type	Imported high-power LED
Communication	USB2.0
Signal acquisition	High-precision photoelectric sensor
Display method	Software display on a standard PC
Instrument dimensions (L*W*H)	248*135*125mm
Power supply	Integrated power supply

Use and verification notes

Compiled from the saved official source. Resolution is not accuracy. Preserve the stated range, environment and configuration conditions. Selection and acceptance are subject to the technical specification agreed by both parties.
